

JERIN T V

Full Stack Developer

Kannur, Kerala | +91-7994340173 | jerintv0173@gmail.com | linkedin.com/in/jerin-t-v | github.com/JerinTV | Portfolio

PROFESSIONAL SUMMARY

Full Stack Developer and B.Tech Computer Science & Engineering student (KTU 2026, CGPA: 8.7/10) focused on building clean, responsive, and reliable web applications. Skilled in creating user-friendly interfaces, secure authentication flows, REST API integrations, role-based dashboards, and database-driven systems. Strong hands-on project experience with React.js, Django REST Framework, PHP, MySQL, SQLite. Known for clear problem-solving, structured development, readable code, and practical attention to usability and performance.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), PHP, SQL, C
Frontend: React.js, HTML5, CSS3, Bootstrap, Responsive Web Design, UI/UX Design, Figma, JSON
Backend & APIs: Django, Django REST Framework, RESTful APIs, JWT Authentication, PHP
Databases: MySQL, SQLite, Relational Schema Design, Query Optimization, DBMS
Tools & Platforms: Git, GitHub, VS Code, Vercel
Core Concepts: Agile, OOP, Data Structures & Algorithms, Operating Systems, Computer Networks

PROJECTS

Zentodo – Full Stack Task Management Application

2026

React.js, Django REST Framework, JWT Authentication, SQLite, Python, JavaScript, RESTful APIs, Git

- Built a full-stack task management application with React.js frontend and Django REST Framework backend, implementing JWT authentication, access/refresh token flow, and 10+ RESTful API endpoints.
- Developed responsive task dashboards with CRUD operations, priority management, category filtering, soft delete, and nested subtasks using Django JSONField for structured hierarchical data.
- Implemented permission checks, modular backend views, optimized ORM queries, and tested API workflows for reliable client-server communication.

Blockchain-Based Fake Product Detection System

2025 – 2026

React.js, Solidity, NFC, MySQL, RESTful APIs, Git

- Developed a blockchain-based fake product detection platform using NFC verification, smart contracts, and off-chain database storage to improve product authenticity checks across supply-chain roles.
- Built REST API workflows for product registration, verification, shipment tracking, and lifecycle updates with hybrid on-chain/off-chain data handling.
- Created React.js dashboards for Manufacturer, Retailer, Consumer, and Admin workflows with role-based access, transaction history, product verification status, and real-time tracking views.

Smart Helmet Safety Portal – Real-Time IoT Monitoring System

2024 – 2025

PHP, MySQL, JavaScript, ESP32, GPS Module, Hall Effect Sensor, REST APIs

- Built an ESP32-powered IoT safety portal that streams live GPS coordinates and speed data through REST APIs for real-time rider monitoring and emergency response.
- Developed role-based dashboards for riders and family members with live location tracking, secure unique-code authentication, accident alerts, and interactive map visualization.
- Designed a normalized MySQL schema and PHP backend using prepared statements to support secure data storage, referential integrity, and reliable IoT data handling.

EDUCATION

Bachelor of Technology – Computer Science & Engineering

2022 – 2026

College of Engineering Thalassery, APJ Abdul Kalam Technological University (KTU), Kannur

CGPA: 8.7 / 10

Higher Secondary Education – Science Stream

2020 – 2022

DHSE Kerala

1157 / 1200 (96.4%)

CERTIFICATIONS

Full Stack Developer – Simplilearn (2024)
Python Programming – GeeksforGeeks (2024)

UI/UX Design – Le Wagon (2024)
Software Development – LinkedIn Learning (2025)
